sequences of PMMM. The PMMMS or their fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. The microarray is useful in monitoring or measuring protein-protein interactions, drug-target interactions, and gene expression profiles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; NOVX; human disease; NOVX-associated disorder; cancer; addiction;

```
polypeptide, nucleic acid and antibody are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The NOVX nucleic acids, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as cancers, Hodgkin disease, Von Hippel-Lindau Syndrome, Alzheimer's disease, stroke, tuberous sclerosis, hypercalcaemia, Parkinson's disease, troke, tuberous sclerosis, ataxia- palsy, epilepsy, Lesch-Nyhan syndrome, multiple sclerosis, ataxia- palsy, epilepsy, Lesch-Nyhan syndrome, multiple sclerosis, depression, pain, cobesity, Crohn's disease, addiction, anxiety, depression, pain, cobesity, Crohn's disease, atterporosis, inflammatory bowel disease, infertility, inflammatory bowel disease, atherosclerosis, hypertension, scleroderma, hemophilia, diabetes, pancreatitis, autoimmune disease, asthma, arthritis, immunodeficiencies, HVV, viral, bacterial or parasitic infections, or graft-versus-host disease. The nucleic acids and palypeptides may also be used as targets for the identification of small
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                           New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. diabetes, multiple sclerosis, atherosclerosis, cancer, infections, osteoporosis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            molecules that modulate or inhibit e.g. neurogenesis, cell defferentiation, cell proliferation, haematopoiesis, wound healing and anglogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or infagnostic methods. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The present amino acid sequence represents a human NOVX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or iragments, and sequences in the specification, or their complements or iragments, and sequences in the specification. The probe is a single exon probe that thybridises under high stringency conditions to a nucleic acid molecule exclusive faint of single exon nucleic acid probes for measuring human cells or tissues. Also included are a spatially-care addressable set of single exon nucleic acid probes for measuring human pene expression (comprising a plurality of single exon microarray for measuring human gene expression, a method of madernay for measuring human gene expression, a method of contiguous amino acids of any of the abover mentioned amino acid contiguous amino acids of any of the abover mentioned amino acid solution and/or licensing single exon probes or microarray to soluted antibody that binds specifically to a peptide cited above, a soluted antibody that binds specifically to a peptide cited above, solutions and/or licensing single exon probes or microarray to a customer destring to measure gene expression, a method of providing seconds of selling and/or licensing single exon probes or microarrays to a customer destring to measure gene expression and acids and paraly in a method of providing to a customer destring to measure gene expression of a single exon probe crock a customer destring to measure gene expression of a single exon probe crock including data on the expression of a single exon probe crock and addition, the probes may be used as tools for surveying crossesion analysis. The probes may be used as tools for surveying crossesion analysis. The probes may be used as tools for surveying crossesion analysis. The probes may be used as tools for surveying alternative splicing events, in detecting and characterising alternative splicing exon probe protein of the invention. Note: The sequence data for forma

RESULT 8 ADP29449

```
The invention relates to a novel isolated polypeptide which is a human kinase and phosphatase (KPP). The polypeptide of the invention demonstrates cardiovascular, antiantication cotto. Wypotensiave, vasotropic, antianianiania, anti-HIV, antiallergic, antianflammatory, antianginal, anti-HIV, antiallergic, antiathmatic, immunosuppressive, antithyroid, dermatological, antiallergic, antighate, nephrotropic, antigout, gastrointestinal, neuroprotective, catepathic, antiarthritic, uropathic, ophthalmological, antitheumatic, antiparkinsonian, nootropic, antilipaemic, antiparasitic, antihelmunic, antibacterial, virucide, protozoacide and funglicide activities. The kinase and phosphatase (KPP) polyuncleotides, polypeptides, agonists and antipacterial wirucide, protozoacides, polypeptides, agonists and antagonists may be useful for diagnosing, treating or preventing antagonists may be useful for diagnosing, treating or preventing cardiovascular diseases, immune system disorders and viral, bacterial, fungal, parasitic, proliferative disorders and viral, bacterial, fungal, parasitic, protozoan or helminthic infections. Purthermore, the molecules of the invention may be useful for creating transgenic animals to model human disease and during gene therapy. The current sequence is that of a human KPP protein of the invention.
human; kinase; phosphatase; KPP; cardiovascular; antiarteriosclerotic; hypotensive; vasotropic; antinflammatory; antianginal; anti-HIV; dermialergic; antiasthmatic; immunosuppressive; antithyroid; dermatchogical; antidabetic; nephrotropic; antidout; gastrointestinal; neuroprotective; osteopathic; antiarthritic; uropathic; ophthalmological; antithematic; antiparkinsonian; nootropic; antiparamit hepatotropic; antiboriatic; haemostatic; cytostatic; antilpaemic; antiparasitic; cytostatic; antilpaemic; antiparasitic; cardiovascular disease; immune system; neurological; growth; development; call proliferation; viral; bacterial; fungal; parasitic; protozoan; single nucleotide polymorphism; SNP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tran UK;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New human kinases and phosphatases, useful for diagnosing, treating or preventing atherosclerosis, hypertension, AIDS, allergy, multiple sclerosis, osteoarthritis, Alzheimer's disease, Crohn's disease, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ., Richardson TW, Marquis JP, Swarnakar A, Tang YT;

This invention relates to a novel method of treating a human subject having a tumourigenic disorder or angiogenic disorder, caused by aberrant gene expression or activity of an isolated protein, by administering a modulator. The modulator may have cytostatic, antithyroid, antidiabetic or ophthalmological activity. The method is useful for treating a busing a tumourigenic or angiogenic disorder, in particular for treating cancer (for example breast cancer, colon cancer, lung cancer or prostatic cancer) and, for example Grave's disease and diabetic retinopathy. The present sequence is the amino acid sequence of the novel isolated human protein 1420 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Treating subject having tumorigenic disorder or angiogenic disorder caused by aberrant polypeptide e.g., N-formylpeptide receptor or nucleic acid, by administering a modulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    bronchial asthma; chronic obstructive pulmonary disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid molecule for diagnosing, preventing or treating diseases such as proliferative (e.g. cancer), inflammatory, immune, metabolic, genetic, bacterial and viral diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     tumourigenic disorder, angiogenic disorder, aberrant gene expression, aberrant protein activity, cytostatic, antithyroid, antidiabetic, ophthalmological, cancer, breast cancer, colon cancer, lung cancer, prostatic cancer, Grave's disease, diabetic retinopathy, protein 1420.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to an isolated nucleic acid molecule encoding a polypeptide which is believed to be cytostatic, antiinflammatory, immunosuppressive, antibacterial and virucidal. The composition and methods are useful for diagnosing, preventing and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treating diseases such as proliferative (e.g. cancer), inflammatory, immune, metabolic, genetic, bacterial and viral diseases. The present sequence represents a human secreted protein. The present sequence is available on WIPOWES and is not in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

AAY30582-Y30700 represent apo-B100 derived peptides showing proteoglycan receptor mutations. They were created to identify compounds which andulate atherosaclerosis. The peptides are derived from amino acids 3358 to 3367 of apoB100. The method comprises detecting compounds which affect low density lipoprotein (LDL) binding with proteoglycan (FG). The method can be used for identifying compounds which disrupt LDL-PG binding without inhibiting LDL receptor binding. Such compounds can be used to reduce or prevent the formation of atherosclerotic lesions and prevent atherosclerosis. The transgenic non-human animals and mammals which atherosclerosis, and in vivo assay methods for identifying compounds which modulate atherosclerosis and/or LDL-PG binding. They can also be used to identify compounds which result in an increase in alterosclerosis. The assays may be used to determine whether a therosclerosis and be used to determine whether
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   a particular food or drug composition fends to stimulate or inhibit the formation of atherosclerotic lesions. The polynucleotides can also be used in gene therapy for preventing or reducing the severity of atherosclerosis in a animal or mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying compounds which affect binding of low density lipoprotein with proteoglycan, used for, e.g. obtaining compounds for reducing
                                                                                 ypo-B100; proteoglycan receptor mutation; atherosclerosis;
low density lipoprotein; proteoglycan; LDL; atherosclerotic lesion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Apo-B100; proteoglycan receptor mutation; atherosclerosis;
low density lipoprotein; proteoglycan; LDL; atherosclerotic lesion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Apo-B100 derived peptide showing a proteoglycan receptor mutation.
                           Apo-B100 derived peptide showing a proteoglycan receptor mutation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           76.1%; Score 33.5; DB 2; Length 10; 90.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present introductive pulmonary disease. The method comprises determining the expression level of a marker gene in a biological sample from a subject, comparing the expression level determined with the expression level of the marker gene in a biological sample from a healthy comprises and judging whether the subject has bronchial asthma or chronic obstructive pulmonary disease. The marker gene comprises: (a) a group of genes (S1) whose expression levels increase when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13; or (b) a group of genes (S2) whose expression levels decrease when respiratory epithelial cells are stimulated with interleukin-13. Also described: (1) a reagent (1) for centing for bronchial asthma or chronic obstructive pulmonary disease; (2) a kit for screening for a candidate compound for a therapeutic agent or treat bronchial asthma or chronic obstructive pulmonary disease; (4) an inducer that induces bronchial asthma or chronic obstructive pulmonary disease, (6) a therapeutic agent for producing an animal model for bronchial asthma or chronic obstructive pulmonary disease, (6) a therapeutic agent for pronchial asthma or chronic obstructive pulmonary disease, (6) a therapeutic agent for compound, a sthma or chronic obstructive pulmonary disease, comprising the compound cexpression of the gene through an RNA ieffect or an antibody recognising the marker gene, a riboryme, a polynucleotide that suppresses the expression of the gene through an RNA ieffect or an antibody recognising a protein encoded by a marker gene; and (7) a DNA chip for testing for a stronic obstructive pulmonary disease, on which and antiasthmatic activities, and can be used in gene therapy. The method componed is useful for testing for or excreening for a broader or an antibody and antiasthmatic activities, made and an expression of the gene productive pulmonary disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Testing for bronchial asthma or chronic obstructive pulmonary disease by comparing the expression level of a marker gene in a biological sample from a subject with the expression level of the gene in a sample from a healthy subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a method of testing for bronchial asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    bronchial asthma or chronic obstructive pulmonary disease. The pr
sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

AAY30582-Y30700 represent apo-B100 derived peptides showing proteoglycan receptor mutations. They were created to identify compounds which condulate atheroselerosels. The peptides are derived from amino acids 3358 to 3367 of apo8100. The method comportses detecting compounds which affect clow density lipoprotein (LDL) binding with proteoglycan (PG). The method can be used for identifying compounds which disrupt LDL-PG binding without inhibiting LDL receptor binding Such compounds can be used to reduce or prevent the formation of atheroselerotic lesions and prevent atheroselerosis. The transgenic non-human animals and mammals which express human apo-B100 can be used as an in vivo model system for the compounds which modulates atheroselerosis and/or LDL-PG binding. They can compounds which modulates thereofererosis and/or LDL-PG binding. They can also be used to identify compounds which result in an increase in atheroselerotic regions. Thus the assays may be used to determine whether compounds witch an apposition tends to stimulate or inhibit the formation of atheroselerotic lesions. The polynucleotides can also be used in gene therapy for preventing or reducing the severity of atheroselerosis in an animal or mammal
                                                                                                                                                                                                         Identifying compounds which affect binding of low density lipoprotein with proteoglycan, used for, e.g. obtaining compounds for reducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Apo-B100; proteoglycan receptor mutation, atherosclerosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAY10582-Y30700 represent apo-B100 derived peptides showing proteoglycan receptor mutations. They were created to identify compounds which condulate atherosclerosis. The peptides are derived from amino acids 3358 to 3367 of apoB100. The method comprises detecting compounds which affect low density lipoprotein (LDL) binding with proteoglycan (PG). The method can be used for identifying compounds which disrupt LDL-PG binding without inhibiting LDL receptor binding Such compounds can be used to atherosclerosis. The transpenic non-human animals and mammals which express human apo-B100 can be used as an in vivo model system for the study of atherosclerosis, and in vivo assay methods for identifying compounds which modulate atherosclerosis and/or LDL-PG binding. They can also be used to identify compounds which result in an increase in a particular food or drug composition tends to stimulate or inhibit the formation of atherosclerotic lesions. The polynucleotides can also be used in gene therapy for preventing or reducing the severity of atherosclerosis in an animal or mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;
                                                                                                                                                                                                                                                                                                                                                         Identifying compounds which affect binding of low density lipoprotein with proteoglycan, used for, e.g. obtaining compounds for reducing atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

AAY30582-Y30700 represent apo-B100 derived peptides showing proteoglycan receptor mutations. They were created to identify compounds which andulate atherosaclerosis. The peptides are derived from anino acids 3358 to 3367 of apoB100. The method comprises detecting compounds which affect low density lipoprotein (LDL) binding with proteoglycan (FG). The method can be used for identifying compounds which disrupt LDL-FG binding without inhibiting LDL receptor binding. Such compounds can be used to reduce or prevent the formation of atherosclerotic lesions and prevent atherosclerosis. The transgenic non-human animals and mammals which express human apo-B100 can be used as an in vivo model system for the study of atherosclerosis, and in vivo assay methods for identifying compounds which modulate atherosclerosis and/or LDL-FG binding. They can also be used to identify compounds which result in an increase in also be used to determine whether can particular food or drug composition tends to stimulate or inhibit the formation of atherosclerotic lesions. The polymoleotides can also be the and an animal or shown and an animal or reducing the severity of shown and an animal or reducing the severity of
                                    ifying compounds which affect binding of low density lipoprotein proteoglycan, used for, e.g. obtaining compounds for reducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying compounds which affect binding of low density lipoprotein with proteoglycan, used for, e.g. obtaining compounds for reducing

```
receptor mutations. They were created to identify compounds which computed attentions. They peptides are derived from amino acids 3358 computate attenceslerosis. The peptides are derived from amino acids 3358 computed at a possible. The method comprises detecting compounds which affect low density lipoprotein (LDL) binding with proteoglycan (EG). The method can be used for identifying compounds which disrupt LDL-PG binding without inhibiting LDL receptor binding. Such compounds can be used to reduce or prevent the formation of atherosclerotic lesions and prevent atherosclerosis. The transgenic non-human animals and manmals which atherosclerosis, and in vivo assay methods for identifying compounds which medulate atherosclerosis and/or LDL-PG binding. They can set be used to identify compounds which result in an increase in atherosclerotic regions. Thus the assays may be used to determine whether a particular food or drug composition tends to stimulate or inhibit the confined and an animal or mammal reducing the severity of atherosclerosis in an animal or mammal
                       AAY30582-Y30700 represent apo-B100 derived peptides showing proteoglycan

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FINCTION: Responsible for the amidation of carboxylic groups at POSITION A and C of either cobyrinic acid or hydrogenobrynic acid. NH(2) groups are provided by glutamine, and one molecule of ATP is hydrogenolyzed for each amidation (By similarity).

PATHWAY: Cobalamin blosynthesis.

SIMILARITY: Belongs to the cobB/cobQ family. CobB subfamily.

Submitted (MAY-1994) to the EMBL/GenBank/DDBJ databases.
-- PUCTION: Receptor for members of the ephrin-A family. Binds with a low affinity to ephrin-A1.
-- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein tyrosine phosphate.
-- SUBCELLUIAR LOCATION: Type I membrane protein.
-- SUBCELLUIAR LOCATION: Type I membrane protein.
-- TISSUE SPECIFICITY: Overaxpressed in several carcinomas.
-- SIMILARITY: Belongs to the Tyr family of protein kinases. Ephrin receptor aubfamily.
-- SIMILARITY: Contains 2 fibronectin type III domains.
-- SIMILARITY: Contains 1 sterile alpha motif (SAM) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Owshalimpur D., Kelley M.J.;

atherosclerotic regions. Thus the assays may be used to determine whether sparticular food or drug composition tends to stimulate or inhibit the formation of atherosclerotic lesions. The polynucleotides can also be used in gene therapy for preventing or reducing the severity of atherosclerosis in an animal or mammal

AAY30582-Y30700 represent apo-B100 derived peptides showing proteoglycan receptor mutations. They were created to identify compounds which are deceptor mutations. They were created to identify compounds which modulate atheroselerosis. The peptides are derived from amino acids 3358 to 3367 of apobl00. The method comprises detecting compounds which affect can be used for identifying compounds which disrupt LDL-PG binding without inhibiting LDL receptor binding. Such compounds can be used to atheroselerosis. The transpension of atheroselerosis and mammals which express human apo-B100 can be used as an in vivo model system for the compounds which modulate atheroselerosis and/or LDL-PG binding. They can be used to identify compounds which result in an increase in a particular food or drug composition tends to etermine whether formation of atheroselerosis and/or LDL-PG binding. They can aparticular food or drug composition tends to etermine whether formation of atheroselerosic lesions. The polynucleotides can also be used in gene therapy for preventing or reducing the severity of atheroselerosis in an animal or mammal

(I) have cytostatic, antiatreriosclerotic, anticonvulsant, nootropic, neuroprotective, cerebroprotective, anti-HIV, antiallergic, antiinflammatory and thyromimetic activities, and can be used in gene therapy. The PMMM polypeptides and polynucleotides are useful in diagnosing, treating and preventing diseases or conditions as sociated with the decreased expression or overexpression of PMMM, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AlDS, allergies) and developmental (e.g. hypothyroidism, Cushing's syndrome) disorders, or infections. They are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid
                                                                                                                                                                              Human; protein modification and maintenance molecule; PMMM; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Chawla NK, Warren BA, Tang YT, Elliott VS;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       09-JUL-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       .8-JUN-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -VION-9.
       The present invention relates to a new polypeptide (Novx). The Novx colypeptide, nucleic acid and antibody are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, confederably a NovX-associated disorder. The NovX nucleic acids, or preferably a NovX-associated disorder. The NovX nucleic acids, or dispeptides and antibodies are useful for treating, preventing or dispensing diseases uch as cancers, Hodgkin disease, Von Hippel-Lindau syndrome, Alzheimer's disease, stroke, tuberous sclerosis, hypercalcaemia, Parkinson's disease, Huntington's disease, cerebral hypercalcaemia, Parkinson's disease, Huntington's disease, cerebral palay, epilepsy, Lesch-Nyhan syndrome, multiple sclerosis, ataxiactellangictusia, leukodystrophies, addiction, antiety, depression, pain, obesity, Crohn's disease, osteoporosis, inflammatory bowel disease, atherosclerosis, hypertension, scleroforma, hemophilia, diabetes, pancreatitis, autoimmune disease, infections, or graft-versus-host disease. The nucleic acids and scleroforman, and any also be used as targets for the identification of small complements, in gene therapy, in generation of antibodies that bind differentiation, cell proliferation, hematopolesis, wound healing and cimmunospecifically to NovX substances for use in therapeutic or immunospecifically to NovX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The present amino acid sequence represents a human NoVX noterin of the invantion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                         New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. diabetes, multiple sclerosis, atherosclerosis, cancer, infections, osteoporosis or parkinson's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence; corn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Claim 8; SEQ ID NO 6; 145pp; English.

```
This invention relates to a novel method for targeting disruption of an arbitrary gene in a genome of an organism which comprises providing the whole sequential data of the genome of such organism, selecting at least a tabitrary region in the sequence, providing a vector that contains a remainder bemologous with the selected region and a marker gene, cransformation, and homologous recombination. The genome is preferably the genome of a hyperthermostable archaebacterium, particularly the genome of a penel in the genome of an organism, which is applicable in studying gene structure and functions as well as enzyme activities of encoded proteins and useful in medicine, forensic science, food or drug in spection, molecular biology and immunology. With this method, the disruption of a gene at an arbitrary position in a genome can be achieved efficiently and reliably. The present sequence is that of a protein concoded by the genome of Thermococcus kodakaraensis which was derived using the method of the invention. Note: The sequence data for this concoded format directly from MIPO at the sequence data for this format directly from WIPO at the invention.
                                                          Method for disrupting targeted gene in genome of organism particularly thermostable bacterium and with genome chips for analysis, applicable in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Xanthomonas axonopodis pv citri plant pathology-related XAC3136 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Kanthomonas microorganism; plant; pathology; bacterial pest; Xac; Xcc;

                                     The invention relates to a novel isolated nucleic acid molecule from a Xanthomonas microorganism where the nucleic acid molecule is associated with pathogenicity caused by the Xanthomonas microorganism, or its variant, that causes reduced or enhanced pathogenicity. The nucleic acid of the invention may be useful in detecting the presence of Xanthomonas bacteria in a sample, as well as in plant pathology, for example, for caused by bacterial pests. The current sequence is that of the Xanthomonas axonopodis pv. citri (Xac) plant pathology-related XAC protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibite proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense encoding a city of a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Zyskind JW;

proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for relular proliferation or the biological pathway is dentifying a gene required for calular proliferation or the biological dentifying a gene required for calular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense mucleic acids required for callular proliferation to isolate candidate molecules for rational card strains or screening for homologous mucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, CC and discovery programs, or for screening homologous mucleic acide by one of card discovery programs, or for screening the sequence is encoded by one of the traget prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained core the target prokaryotic segmented specification, but was obtained core the target proverse or the present directly from WIPO at the present directly from the present sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

AAY30582-Y30700 represent apo-B100 derived peptides showing proteoglycan receptor mutations. They were created to identify compounds which modulate atheroseleroselerosis. The peptides are derived from amino acids 3358 to 3367 of apoB100. The method comprises detecting compounds which affect low density lipoprotein (LDL) binding with proteoglycan (PG). The method can be used for identifying compounds which disrupt LDL-FG binding without inhibiting LDL receptor binding. Such compounds can be used to reduce or prevent the formation of atherosclerotic lesions and prevent express human apo-B100 can be used as an in vivo model system for the study of atherosclerosis, and in vivo assay methods for identifying compounds which modulate atherosclerosis and/or LDL-FG binding. They can also be used to identify compounds which modulate atherosclerosis and/or LDL-FG binding. They can also be used to identify compounds which result in an increase in atherosclerotic regions. Thus the assays may be used to determine whether a particular food or drug composition tends to stimulate or inhibit the committee of atherosclerotic regions. The polynucleotides can also be used in gene therapy for preventing or reducing the severity of atherosclerosis in an animal or mammal
                                                                                                                                                                                                 ö
were located in one of the most conserved regions of GRD. These sites were compared with those of other GRD family proteins, yeast Ira2 (AAR59926) and Ira1 (AAR599313), human GAP (AAR5994) and Schizosaccharomyces pombe Gap1 (AAR59925). (Updated on 25-MAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying compounds which affect binding of low density lipoprotein with proteoglycan, used for, e.g. obtaining compounds for reducing

Sequence 10 AA;

Human neurofibromatosis type 1 (NP1)-GAP related domain (GRD) mutant clones NP201 (given in AAR59221) and NP204 (AAR59922) show strong suppression activity for RAGSVall9, and inhibit v-Ras-induced transformation in mammalian cells. The mutation sites of these proteins

Blocking Ras-induced effects on a cell - by introducing a GTPase activating protein to the cell, used esp. in treatment of cancers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY30582-Y30700 represent apo-Bl00 derived peptides showing proteoglycan receptor mutations. They were created to identify compounds which computate atherosals. They were created to identify compounds which computate atherosals. The peptides are derived from amino acids 3388 to 3367 of apoBl00. The method comprises detecting compounds which affect can be used for identifying compounds which disrupt LDL-PG binding with proteoglycan (PG). The method compounds to the transgenic non-human animals and mammals which express human apo-Bl00 can be used an in vivo model system for the express human apo-Bl00 can be used as an in vivo model system for the express human apo-Bl00 can be used as an in vivo model system for the express human apo-Bl00 can be used and in vivo assay methods for identifying also be used to identify compounds which result in an increase in the about the assays may be used to determine whether can particular food or drug composition tends to stimulate or inhibit the formation of atherosclerotic lesions. The polynucleotides can also be used in gene thersapy for preventing or reducing the severity of atherosclerosis in an animal or mammal

The present sequence represents a specifically claimed Apo B binding site peptide which can be used as a component of a non-naturally occurring, receptor-competent low density lipoprotein (LDL) particle of the present invention. The LDL particle comprises at least 1 peptide component that has at least 1 binding site for an apo B protein receptor and at least 1 lipophilic substituent. Also described in the invention are peptides containing an apo B binding sequence with at least 70% identity with sequences: KAEYKKNKHRH (1) or TTRLTRKRGLK (2), or their dimers. Non-naturally occurring, receptor-competent LDL particles are useful as: (1) drug-targeting vectors for delivering anticancer drugs to cancer cells that express an apo B protein receptor, and (ii) additives for call culture media especially as growth supplements. Non-naturally occurring, receptor-competent LDL particles do not require the complete apo B sequence, which is large and tends to aggregate, to provide binding caffinity to an apo B protein receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ij

ò

prothrombinase complex.

Synthetic. Homo Bapiens. WO9743311-A1.

```
The present sequence represents a specifically claimed Apo B 100 binding site peptide analogue which can be used as a component of a non-naturally occurring, receptor-competent low density lipoprotein (DDL) particle of the present invention. The LDL particle comprises at least 1 peptide component that has at least 1 binding site for an apo B protein receptor and at least 1 lipophilic substituent. Also described in the invention are peptides containing an apo B binding sequence with at least 10% identity with sequences: KARYKKNKHRH (1) or TTRLTRKRGLK (2), or their dimers. Non-naturally occurring, receptor-competent LDL particles are useful as: (i) drug-targeting vectors for delivering anticancer drugs to cancer cells that express an apo B protein receptor, and (ii) additives for cell culture media especially as growth supplements. Non-naturally occurring, receptor-competent LDL particles do not require the complete app B sequence, which is large and tends to aggregate, to provide binding

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-- FUNCTION: Probably recognizes and binds to some phosphorylated
proteins and promotes their ubiquitination and degradation.

-- SUBUNIT: Part of a SCF (SKP1-cullin-F-box) protein ligase complex
                                                                                                                                                                              05-JUL-2004 (Rel. 44, Created)
